

The picture shows the magnifying lens without table.

Play value
Here, the energy of sunlight can be experienced directly. As soon as the sunlight encounters resistance or impermeability, it is converted into warmth which we notice on our skin, for example. Sunlight is collected in the 30 cm magnifying lens and is concentrated to a beam. The rougher and darker the material that it encounters, the more the rays are converted to heat. This can be experienced by carefully placing the hand behind the lens. Even wood can be scorched at the focal point.

- Recommended for**
- Kindergarten children
 - School children
 - Young people
 - Adults
 - Older people

Magnifying Lens with Table
graubner Play Stations
for Developing the Senses

Vandalism	vulnerable in non-supervised areas
Supervision	absolutely necessary can generate considerable heat
Explanation Board	included
Installation	outdoors
Safety check (DIN EN 1176)	has been completed
Installation in concrete	possible

10.32000

Technical information

Equipment made of stainless steel

Sintered bush

For all reciprocating movements we use sintered plain bearings which are self-lubricating in use and can easily be exchanged if necessary

Ground anchor

All parts used for anchoring to the ground are made of hot-dip galvanised steel or stainless steel

For more detailed explanation of the quality characteristics see price list.

Universal joint support made of stainless steel, rotatable and pivotable in all directions, maintenance-free bearings

Large-sized optical plano-convex collection lens made of shatter-proof acrylic glass

Support for Explanation Board made of stainless steel

Dimensions

(small deviations possible)

Height	1.20 m
Lens diameter	0.30 m
Weight	75 kg

Components

- 1 Complete piece of equipment with table
- 1 Explanation Board with support for dowelling and 4 heavy duty anchors

Trademark
